Cyber Resilience can be thought as the ability to anticipate, withstand, recover from, and adapt to adverse conditions, stresses, attacks, or compromises on systems that use or are enabled by cyber resources.

Threat Actors have been very transparent about focusing their efforts on businesses with less resources. Being Cyber Resilient will better position you to handle a cyber-attack. **Please join us as we discuss:**

- What is Cyber Resilience?
- What are the top threats that are trending right now?
- What are the minimum security requirement must haves?
- What are banking solutions for fraud protection to protect your account?
- Education on wires: emails and spoofing.
- What are cyber insurance challenges when claims are reported?
